

2021 Chronic Preventive medications and your HDHP plan

Managing your health with preventive medications

Your HDHP pharmacy benefit plan includes special coverage for preventive medications. These medications help protect against or manage a medical condition, such as:

- Preventing blood clots and reducing the risk of a stroke
- Preventing heart disease and reducing high blood pressure
- Preventing osteoporosis (a disease that leads to an increased risk of bone fracture)

Your health is important. Taking preventive medications as told by your health care provider can help you avoid serious illness and high health care costs.

In this drug list, brand-name medications are shown in UPPERCASE (for example, COUMADIN) and generic medications in lowercase (for example, warfarin).

Special coverage for preventive medications

The drugs on your plan's preventive medications list do not have a deductible. This means you'll pay your copayment/coinsurance or nothing at all, depending on your plan. It can save you money and get the medications you need to help you live a healthier life.

Preventive medications are a group of products in your plan's formulary which tells you what medications your plan covers.

Please note that most medications on the formulary have a deductible, but preventive medications do not. To check the cost of any medication, see your benefit handbook or contact customer service at the number on your member ID card.

Potential savings with generic medications

To get the most from your benefits, ask your doctor if a generic medication is right for you. Generics normally cost less than brand medications, and the Food and Drug Administration (FDA) requires them to be just as safe and effective.

Quality drives our decisions

A group of doctors and pharmacists meets often to review medications and coverage under pharmacy benefit plans. They also suggest which medications should be on your plan's preventive medications list.

A list of covered preventive medications begins on the next page. Medications are listed by therapeutic category.
